### Demo -1: Create a Maven Project and compile the pulled code from repository.

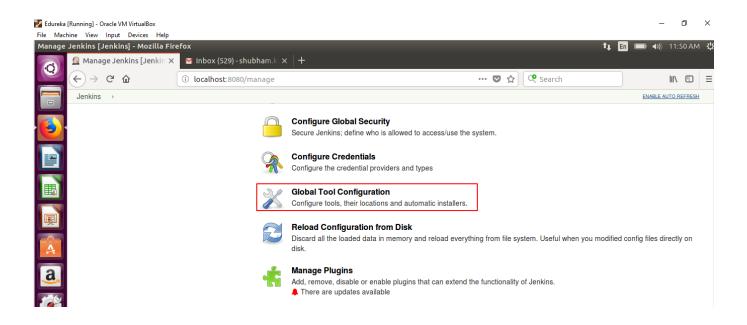

Step 1: Create a maven project using Jenkins.

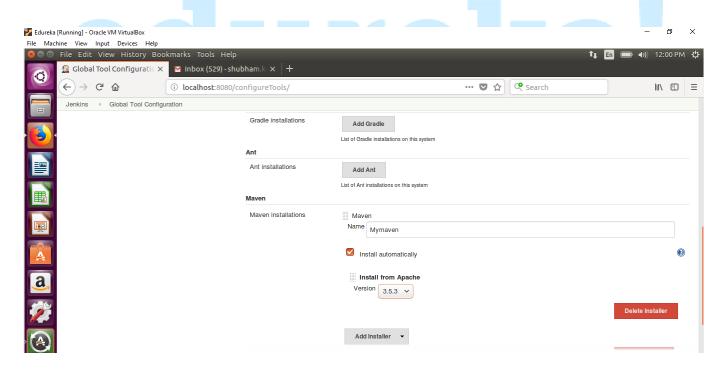

Step 2: Open the Jenkins dashboard to view your project.

### Step 3: Go to manage Jenkins and then on Global Tool Configuration.

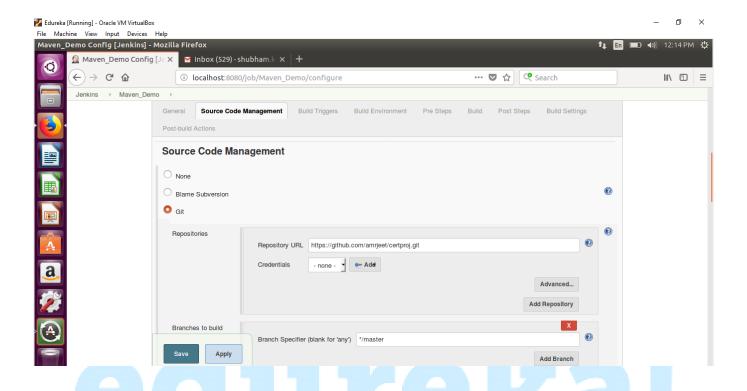

Step 4: Install Maven plugin with the latest version available in the dropdown menu of Apache.

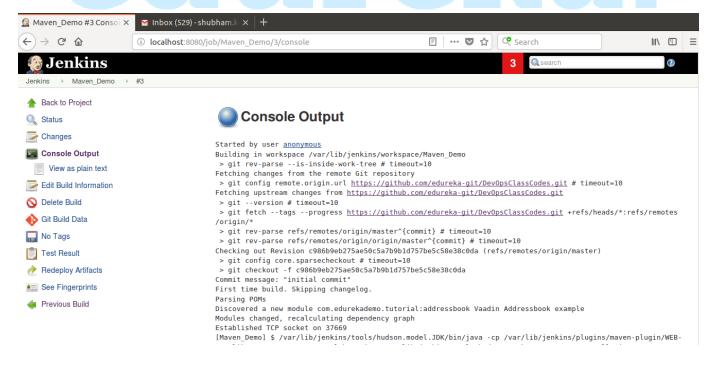

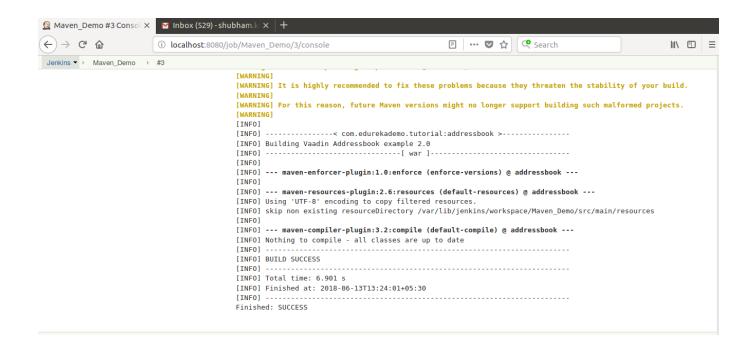

Now Jenkins will install the maven automatically.

Step 5: Provide the repository path to your project which is to be built.

Step 6: Go to the build and check the console output of your project.
